

ShieldPNG data — understanding your district's violence profile.

The fatal violence information displayed on the ShieldPNG maps at national, provincial and district level are gathered from newspaper articles and other major news sources.

National

Provincial

District

Newspaper articles and other
major news sources

If fatalities were not reported in the media, they will not appear on the map. These maps do show trends and levels of violence.

WHAT YOUR DISTRICT'S PROFILE MEANS

If your district has had deadly violence or you fear it may in the future, we hope you will join us as a Peacemaker or engage through ShieldPNG Connect.

If your district or province pages show that there has been relatively low or no level of deadly violence, we hope you can use those pages to promote their relative safety to others. This may help with tourism and development investment.
